Morphing UI Element - Sample #1

Visually:

<u>Show</u>
1) The image element and title text grow and center. From the position of the targeted image
2) Then vertical aspects of top, body, and bottom bar slide out from center
3) Then body text fades in with the footer text
ThefadesIn and grows.

<u>Hide</u>
The reverse of Show should happen; but faster transitions with a easing finish

<u>Questions:</u>

1) Is this a route change
2) This uses an overlay, so a what about navigation within the overlay zoom? Does that hide the overlay or simply route within the overlay.
